

Reduction of greenhouse gas emissions from EU agriculture and agricultural peatlands between 2020 and 2050

→ Fig. 10

● Emissions from livestock and manure ● Emissions from agricultural soils ● Other emissions from agriculture ● Emissions from agricultural peatlands

Agora Agriculture (2024). *values for 2050 are derived from CAPRI modelling results for 2045; **estimate for emissions from agricultural peatlands with CAPRI data on organic soils and emission factors from IPCC (2014); Note: N₂O emissions from manure application under "livestock and manure"; N₂O emissions from organic soils under "agricultural peatlands"
